

SolaraSound Announces Its T150 & T100 Home Theater Package Systems

Cerritos, CA, July 24, 2007 – SolaraSound is proudly to announce its T150 & T100 home theater package systems for its retail distribution channel. With its power handling at 150 Watts, an 88dB sensitivity, and a 50-20k Hz (+/- 3 dB) frequency response; the T150 Tower Speaker delivers the additional power needed for that extra kick in your sound system. For dynamic power delivery, it relies on two 10" woofers and a 5" mid-range driver containing a fiberglass weave cone diaphragm for added strength and superior sound output to accompany its increased product life. The 1" soft dome tweeter finishes the assemblage by complementing the exceptional smoothness with crystal clear high frequency reproduction. The bi-wiring on the T150 provides contrast in the pitch range to enhance sound clarity.

The attractive design of our tower unit's case design will complement your media room aesthetics with four finishes to choose from. With a combination of all these features, the T150 provides superior audio performance to your media presentation. Whether it is music, action-adventure movies or classic musicals, the T150 will deliver the performance you need.

The T100 is the answer to providing an exceptional sound system for your media room. A combination of two 6 1/2" woofers with a 4" mid-range driver will immerse you into the full audio experience from smooth bass tones to wall-shaking action sequences. Its 1" tweeter provides the sharp, crisp high-frequency sounds that bring out the full sense of first-person involvement that your home media system should provide.

To enhance sound clarity, the T100 has a bi-wired connection which creates a contrast in the high and low frequency sounds. Our intention with this feature is that every thump should be felt while preserving the lucidity of high-frequency sounds.

The T100 comes in four elegant finishes to match your lifestyle as well as to blend into your home entertainment system. With any great product should be its ability to accommodate a diverse range of media room environments. The T-100 delivers with the looks and performance in an attractively priced package.

Close the circle of true surround sound immersion with this unbeatable combination. The C-100 center speaker coupled with the S-100 surround sound

units produce an unbeatable duo of great sound reproduction at an attainable price point. The 5" Mid-Range and 1" Tweeter delivers 65W power handling with 86dB sensitivity. The central C-100 unit works with a double Mid-Range and Tweeter configuration while S-100 satellite's single Mid-Range and Tweeter wrap your audience in the surround sound experience worthy of the expectations one should have for a quality home entertainment system. The speakers and their accompanying speaker stands come in a variety available color schemes to match the aesthetics of your entertainment system.

The new ASW-150 powered subwoofers deliver heart-pounding bass for and edge of your seat home theater sound performance with a 12" driver, 2" voice coil with a 150 watt power amplifier at a 30-150Hz frequency response.
